UNIFY

HUMAN RISK MANAGEMENT PLATFORM

It's time for a revolutionary and proactive approach to enable organizations to quantify, engage the team, and measure human risk.

Unify leverages an organization's data from existing technology platforms to deliver unique, actionable insights to prioritize resources, focus efforts, and proactively decrease human risk. By minimizing human risk exposure, an organization's overall risk is reduced.

Quantify Risk with Actionable Insights

Measure human risk across the organization with aggregated data from existing siloed systems. With complete visibility into the workforce's behavior, Unify enables security leaders to identify and quantify areas of risk and vigilance for quick and effective decision making and intervention.

Make More Informed Security Decisions

Gain a deeper understanding of the riskiest and most vigilant individuals and groups within the organization and uncover the activities and context causing risk exposure. Understand the segmentation by department, individual, location, and role. Use insights to make informed decisions across the security program and trigger targeted action plans to the specific risk categories.

Transform Your Team into a Proactive Line of Defense

Leverage automated and individually prescriptive training intervention, positive reinforcement, and healthy competition to cultivate and reinforce a vigilant security culture. By engaging the workforce with risk mitigation targeted to an individual's behaviors, scorecards and risk, they more clearly understand the impact of their actions in the moment and make lasting behavior changes.

"In the past, we would look at things like, did people do the online training? As I learned more, I realized that that's not really enough, it's really the behavior change that I want. With Unify, I can correlate all our data, and in doing so, I learn things that I hadn't known before."

Unify Key Features

Altering behavior and empowering team members to be the most effective defense against cyber threats requires a data-centric, analysis-driven approach. Unify aggregates and correlates data to then monitor and find trends for better security decisions that empower every person in the organization to become a security asset.

Intelligence Engine

This engine ingests, aggregates, and correlates data across the existing technology stack as well as public OSINT data, to power the Human Risk Index (HRI) risk scoring, behavior insights, and action plans.

Human Risk Index (HRI)

HRI is a proprietary, patent-pending algorithm that sorts individuals and groups into five distinct levels of risk. The model takes hundreds of criteria and behavior data points into consideration based on the integration of an organization's tech stack.

Tailored, Risk-based Action Plans

After identifying and quantifying areas of human risk, tailored action plans are generated so an organization can remediate risks, all without leaving the platform.

Robust Reporting

Easily understand risky and vigilant areas with visual, real-time dashboards at the organization, segment, department, and individual levels.

Engage the Business in a Risk Focused Conversation

Uplevel the security conversation by putting human risk exposure in the business terms Directors, VPs, and Senior Executives understand. With Unify's scorecards, assess which individuals and behaviors are driving risk, and then partner with stakeholders across the organization to create change.

The Most Complete Human Risk Management Platform

Unify, combined with Living Security's industry-leading Training, Teams, and Phishing products, provides all the capabilities needed to fully implement a Human Risk Management approach. Deploying these components allows enterprises to drive dramatic improvement in human behaviors, organizational culture, and security effectiveness.

About Living Security

Living Security's mission is to transform human risk to drive dramatic improvement in human behaviors, organizational security culture, and infosec program effectiveness. With our Human Risk Management platform, Living Security engages each employee with innovative and relevant context and content, while simultaneously providing the ability for leadership to identify, report on, and directly mitigate the risk brought on by human behavior.
