SOLUTION BRIEF:

Living Security + Netskope Integration

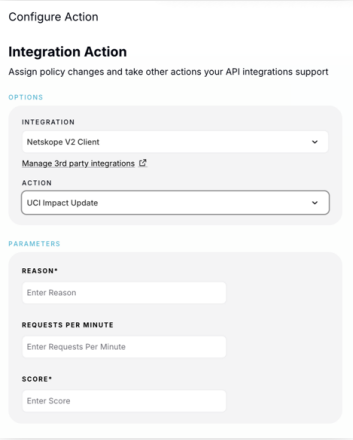
Adaptive Access Decisions Fueled by Real-Time Human Risk Intelligence

The Challenge

Security teams often work across multiple systems that lack shared context. When Netskope blocks user activity, alerts surfaced in Living Security may lack detailed reasoning, making it harder to prioritize response. At the same time, Living Security generates valuable behavioral risk signals that haven't historically informed Netskope's enforcement decisions. By bringing these two platforms together, organizations can bridge the gap between insight and action—enabling adaptive, human-aware access control.

The Solution

The **Living Security + Netskope integration connects human risk intelligence with adaptive access control.** Living Security's context-rich insights now informs Netskope's User Confidence Index (UCI), and enriched metadata helps analysts focus on real threats.



Key Capabilities

- Enriched alert context to distinguish policy violations from threats.
- Automatically distinguish between high and low-risk web blocks.
- Dynamic risk scoring with context-rich human-centric risk insights flowing into UCI.
- Trigger interventions such as nudges, just-in-time training, or access restrictions.

Value-Driven Business Outcomes

1. **Sharper Focus on Real Threats** allows analysts to spend less time on noise and more on meaningful threats.
2. **Adaptive Access Enforcement Decisions** reflect user behavior, identity, and intent.
3. **Faster, Smarter Triage Increases** alert confidence, reduces investigation time.
4. **Increased ROI** by gaining greater value from existing Netskope and Living Security tools.
5. **Future-Ready Governance** to help extend access controls to human and AI actors alike.

About Living Security

Living Security is a pioneer in Human Risk Management, helping enterprises measure, manage, and reduce cybersecurity risks stemming from human behavior. Its flagship platform, **Living Security Unify**, delivers a comprehensive solution that analyzes behavioral data, correlates risk signals from across the enterprise ecosystem, and activates real-time security awareness, micro-training, and targeted interventions.

Living Security partners with global enterprises to transform security from a compliance-driven checkbox to a strategic, people-first program. By aligning human behavior with organizational security objectives, Living Security enables proactive risk mitigation, improved operational resilience, and a more engaged workforce.
