BUSINESS RISK

MALWARE

75%
Of companies were hurt by malware attack in 2022[1]

Challenge
Malware can be devastating to an organization and analysts predict incidents will continue to rise. Combining an increase in the variety and sophistication of malware threats with the growth of connected devices and a distributed workforce has created the perfect storm. Many organizations are using the latest technology to mitigate the threat; however, malware is most often penetrating the security perimeter by tricking unassuming employees. The only way to close this gap is by enabling employees to act as an extension of the security team.

Solution
Living Security's Unify, a Human Risk Management solution, captures relevant insights and data points to arm security teams with the intelligence to decrease human risk exposure and observe the workforce taking a proactive defense.

Capabilities:
- Understand which users are most susceptible to malware
- Identify users with risky endpoint (or device) hygiene
- Learn who is visiting or has attempted to visit malicious websites
- Track phishing hygiene and competence

Outcome
As a result of tracking and surfacing these insights your organization will feel confident that you are able to comprehensively mitigate malware threats and protect your brand's reputation, data, and employees from harm.

Actionable insights improve cyber culture and reduce human risk including the ability to:
- Mitigate the impact of malware.
- Improve security awareness of users.
- Uncover issues that can be eliminated with existing technology platforms.
- Boost confidence in your defenses.

Integrations
Connect the following technologies with Unify to understand, track, and reduce malware incidents from occurring among your workforce.

 Endpoint Detection & Response

 Email Security

 Web Security

 LMS/Training

View featured integration providers

Insights Uncovered
Surface insights to drive change in your organization and reduce the likelihood of malware incidents, including:
- Endpoint security hygiene
- Phishing hygiene
- Risky web browsing activity
- Security Awareness & Training performance

Malware

- Identify segments & individuals susceptible to malware

- Analyze malware vectors that pose the most risk

- Better leverage preventive technologies already owned

- Act on insights to reduce risk and severity of malware incidents

Objectives

- Reduce probability of malware incidents

- Improve vigilant behaviors and security awareness

- Ensure incidents are contained and minimized

- Remediate risky access and activities

Behavior Change

- Usage of Endpoint Detection & Response solutions

- Communicating suspected incidents

- Quarantining suspected devices

- Blocking unapproved/ malicious websites

- Identifying suspicious emails

Insights

- Endpoint (or Device) Hygiene

- Phishing Hygiene

- Risky Web Browsing Activity

- Security Awareness & Training Performance

Integrations

- **Endpoint Detection & Response**
  (e.g. CrowdStrike, Sophos)

- **Web Security**
  (e.g. Netskope, Skyhigh)

- **Email Security**
  (e.g. Proofpoint, Mimecast)

- **LMS/Training**
  (e.g. Living Security, KnowBe4)
